LeetCode

PROFESSIONAL SUMMARY

Results-driven Computer Engineer with a strong foundation in AI/ML, data engineering, and secure system design. Proven track record of architecting scalable machine learning pipelines and developing innovative frameworks, including hybrid encryption for federated learning. Passionate about translating complex data into actionable, deployment-ready solutions that optimize performance, increase system reliability, and drive measurable business value.

EDUCATION

Marwadi University

B.Tech in Computer Engineering

CGPA: 8.43/10.0 | First Class with Distinction

Rajkot, India

2022 – 2026

TECHNICAL SKILLS

Languages: Python, SQL

AI/ML & Data Science: TensorFlow, Keras, Scikit-learn, Pandas, NumPy, Computer Vision, NLP

Tools & Platforms: AWS, IBM Watsonx, Power BI, Git, Linux, MS Excel

EXPERIENCE

Dyne Tech AI Private Limited

Statistical Data Engineer Intern

Bengaluru, India

Oct 2025 – May 2026

- Architecting scalable ML pipelines for deployment-ready, data-driven systems in a production environment.
- Contributing to end-to-end AI model development, focusing on data auditing and statistical optimization.

Defence Electronics Applications Laboratory (DEAL), DRDO

Summer Trainee

Dehradun, India

May 2025 – July 2025

- Engineered a real-time Intruder Detection System utilizing a PCA-SVD feature extraction pipeline and KNN classification model during a tenure at a premier government research lab.

India Space Academy

Astronomy & Astrophysics Intern

Remote

June 2025 – July 2025

- Applied computational analysis to astrophysical datasets to research galaxy cluster mass estimation and the determination of the Hubble constant using supernovae data.

Afame Technologies

Machine Learning Engineer Intern

Bengaluru, India

Apr 2024 – May 2024

- Deployed two distinct ML models to production, enhancing predictive model accuracy by 80% and reducing operational errors by 10% through advanced feature engineering.

Edunet Foundation

AI & Cloud Intern

Rajkot, India

Jan 2024 – Feb 2024

- Developed a streamlined college admissions chatbot using IBM Watsonx Assistant and standard NLP libraries.

PROJECTS

FLIP: A Hybrid BFV-CKKS Encryption Framework

Python, TensorFlow, Keras

Developed a novel federated learning framework using homomorphic BFV-CKKS encryption, achieving 99.23% accuracy on MNIST datasets while mitigating adversarial threats.

Naval Ship Detection in Enemy Waters

Python, YOLOv8, Federated Learning

Architected a real-time, privacy-preserving object detection system to classify naval vessels from distributed data.

Data Waves – Data Engineering Capstone

AWS, SQL, Python

Designed scalable data pipelines and processed large-scale datasets as the capstone project for the AWS Academy.

Software Fault Tolerance with ML/DL

Python, Pandas, Scikit-learn

Applied deep learning models to predict and mitigate software faults, improving system robustness and reliability.

ACHIEVEMENTS & CERTIFICATIONS

- Certifications:** Microsoft AI & ML Engineering (Nov 2025), Google Cloud OnBoard (Jan 2026), IBM Data Analysis & Project Management (2024).
- AWS Academy Graduate:** Data Engineering (June 2024) & Cloud Foundations (Sep 2024).
- Awards & Badges:** BITATHON Hackathon Participant (May 2025), Python Institute Essentials 1 & 2 (May 2025).
